

### **LPR technology boosts police effectiveness**

Licence Plate Recognition technology (or LPR), is now being widely used by different law enforcement agencies to curb crimes such as hijacking and vehicle theft. Although LPR technology is used for various other applications, such as access control, parking systems and security, its use in traffic surveillance, car trapping, toll roads and border control, makes the movement of stolen vehicles much more difficult for criminals.

Developed by Barry Dudley of I-Cube, and marketed by Doculam (Pty) Ltd., this growing technology is available in different packages, such as SeeCar and SeeLane, and is fast becoming an invaluable tool in the fight against crime.
